

Is your Solar System Safe?

How do you know?

Are you at Risk?

If you haven't maintained your system in the last 12 months, at best it is not giving you the returns you have paid for. At worst it could be down right dangerous.

There have been 30 house fires caused by Solar Systems in the last 12 months.

98% of these house fires were preventable through annual maintenance.

What equipment Needs Maintenance?

- Solar Panels
- DC Isolators
- Inverters
- Switchboards
- Earthing

What is required?

- Legislation requires systems to be maintained annually for grid connection to be compliant
- Solar Panels are exposed to the harsh elements Blazing sun, Rain, wind and Hail and need inspection and maintenance. Hot spots and inefficient cells are a common problem. Thermal imaging can find issues in panels quickly
 - DC Isolators are the most needy for maintenance. Loose connections on these are a common cause of fires
 - Inverters are full of electronics and are getting hot and cold causing loose connections
 - Switchboards also have a common fault with loose connections causing fires
 - The Earth is the Safety Wire. If this is loose then an electrocution can occur
 - Keeping of accurate records ensures your insurance remains valid

Pricing from \$200 + GST. Now that's Cheap Insurance

Electric Results provides a cost effective solution for all of these requirements with information in a simple, search-able, cloud based interface in real time.

Call us for a free 30 minute discussion on how we can help to remain safe and compliant

Don't Risk it, there is a better way.

Electric Results helps building owners and facility managers to be accountable for their assets, in an organised and efficient manner through total transparency of information
